Konami confirms new PES2008 patch by next Monday!

If you're new here, you may want to subscribe to our [RSS feed](#). Thanks for visiting!

Konami have confirmed that they are working on a patch to resolve the online lag issues that users are experiencing with PES2008 and expect to make it available to the public by the 19th November.

In an interview with PESforums.com, a Konami spokesperson confirmed:

"We hope to have the patch released within two weeks at the latest, and have set a deadline of Monday 19th November to get this to the public, as we are aware there are a lot of gamers out there that are avoiding a massive part of the game because of the online issues."

When told that many PES fans may be switching over the series' main rival, FIFA, due to the online issues, the spokesperson pleaded for patient for the PES gamers:

"I would say to ALL PES fans to be patient with us while we rectify the problems, please be assured that we are working very hard to fix these problems. We hope that everyone will soon be enjoying the online aspect of the game which people will love playing with their friends and fellow gamers."

Take-Two have confirmed that the game is still on track for release early next year.

Take-Two's chairman, Strauss Zelnick, said:

"I wasn't intending to be newsworthy. When asked about the release date, I confirmed the previous release date we'd given, which is our second fiscal quarter. That's to say sometime between the beginning of February and the end of April."

As for the exact date for GTA IV, well... we'll have to wait.

"Obviously we want to make sure not to disappoint anyone, and we're going to give that date as soon as we feel very comfortable that we know the exact date within that three-month period that we outlined"

New Security System for USB pens!

The system is called PASS, which stands for Password Authentication Security System.

You're probably thinking - password protected USB drives right? but that is not how this the PASS system works.

What you do is set up the USB stick by authorizing in which computers it can work with. From there, only the PC that you accepted will be able to access the data!

The storage capacity goes up to 16GB.
